

BUILD YOUR OWN FREE BULK TWITTER FOLLOW & UNFOLLOW BOT

SCRIPT INSTALLATION & SETUP

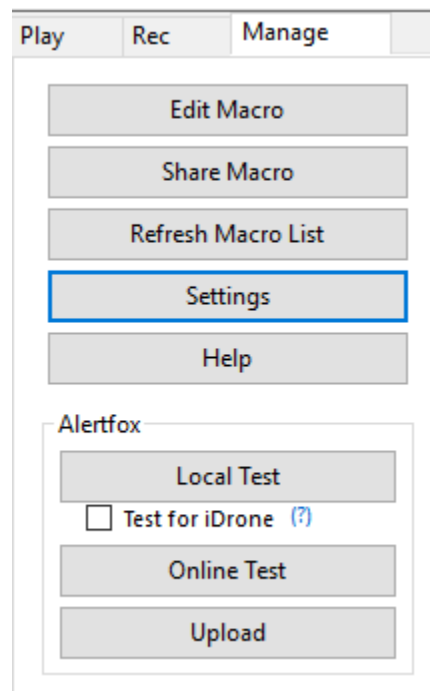

You are minutes away from hacking together your own free Twitter bulk follow and unfollow tool.

Here's what you need to do in order to get up and running:

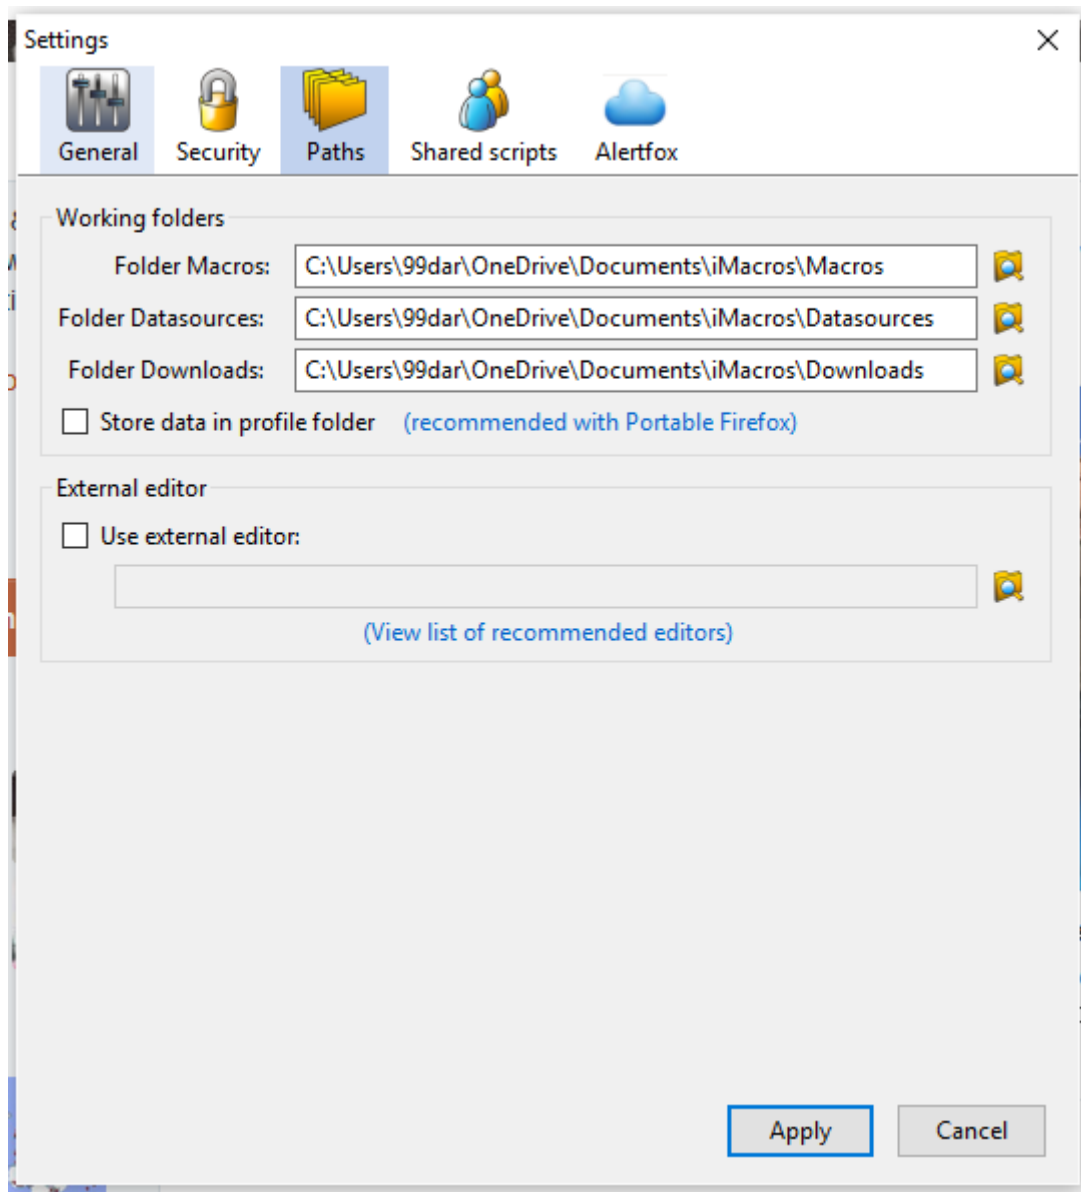

Install Imacros For Firefox

- [Download it here](#)

Once installed, you need to add the scripts I attached into your Imacros > Macros folder. You can find this in Imacros by clicking on the "Manage" tab and then "Settings".

Once “Settings” is clicked, you will see a screen like this. Be sure to click on the “Paths” tab.

Copy the URL for the “Folder Macros” and paste it into Windows Explorer.

chris makara > OneDrive > Documents > iMacros > Macros				
	Name	Date modified	Type	Size
ss	Demo-Firefox	7/12/2016 2:11 PM	File folder	
Is	Secret Scripts	7/12/2016 2:12 PM	File folder	
	Twitter-Follow.iim	7/12/2016 1:58 PM	IIM File	1 KB
ts	TwitterScraper-Followers-Following.iim	7/10/2016 12:06 PM	IIM File	1 KB
	TwitterScraper-Search.iim	7/10/2016 6:54 PM	IIM File	1 KB
images	Twitter-Unfollow.iim	7/12/2016 1:59 PM	IIM File	1 KB

Within this folder, you will need to paste each of the Imacros I provided you.

Install GreaseMonkey For Firefox

- [Download it here](#)

After you have it installed, you will need to add the provided GreaseMonkey script in order to create the automated scrolling.

Here's how you can install it.

In Firefox, click on the GreaseMonkey Icon, then "New User Script".

Give it a name like "Autoscroll" and save. A new window will appear where you can paste in the script I provided called "Autoscroll".

```

File Edit View Help
Open File... Save Save As... Pretty Print
1 var lastScrollHeight = 0;
2 function autoScroll() {
3     var sh = document.documentElement.scrollHeight;
4     if (sh != lastScrollHeight) {
5         lastScrollHeight = sh;
6         document.documentElement.scrollTop = sh;
7     }
8 }
9 window.setInterval(autoScroll, 10000);

```

Line 9, Col 39

Once you have pasted it in, save the file and close.

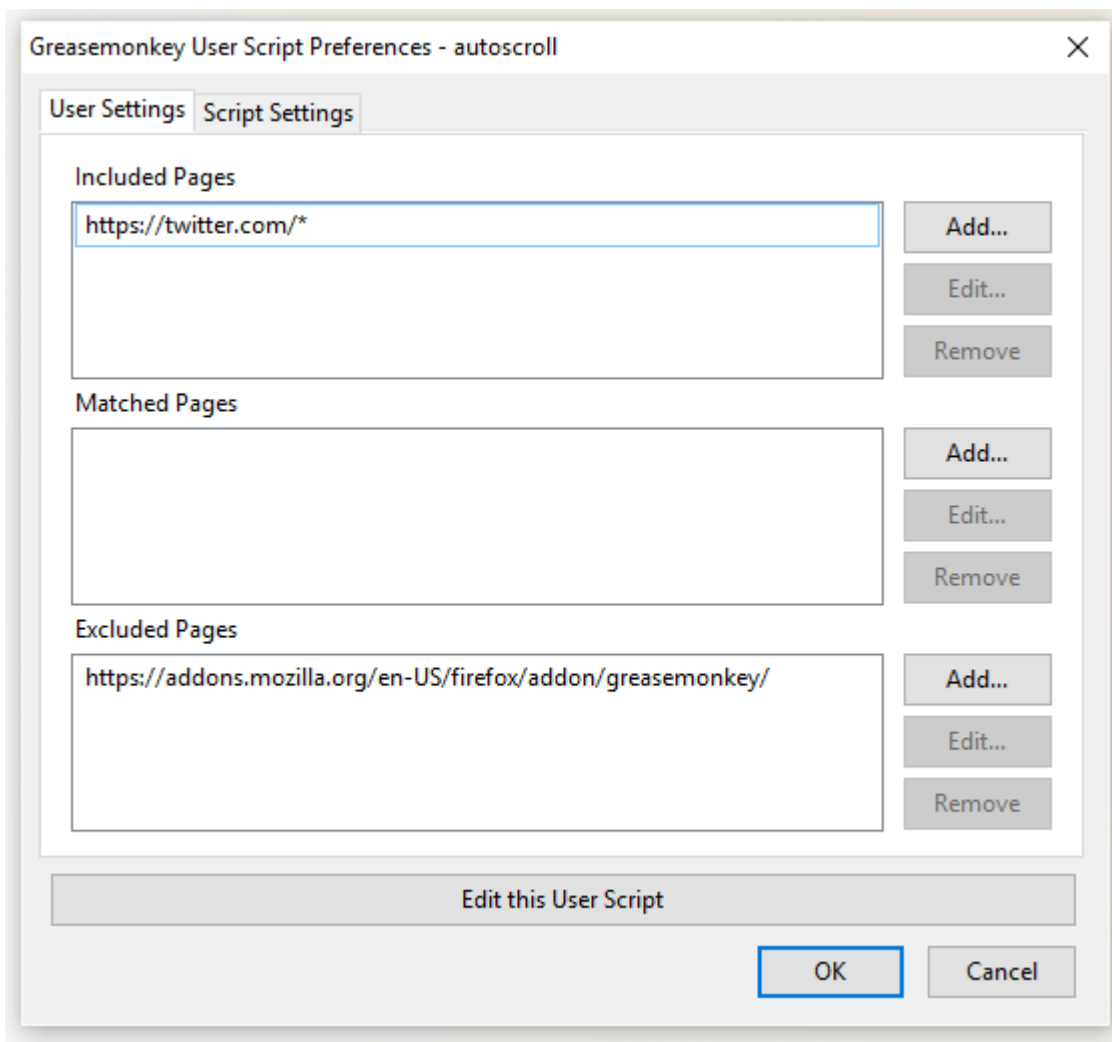

The last thing we need to do is tell the autoscroll script where it should run when activated. To do this, click on the GreaseMonkey icon, then “Manage User Scripts”.

On the Add-Ons screen, click “Options” for your autoscroll script.

An overlay will appear.

In the “Included Pages” section, click “Add” and enter this into the prompt:

<https://twitter.com/>*

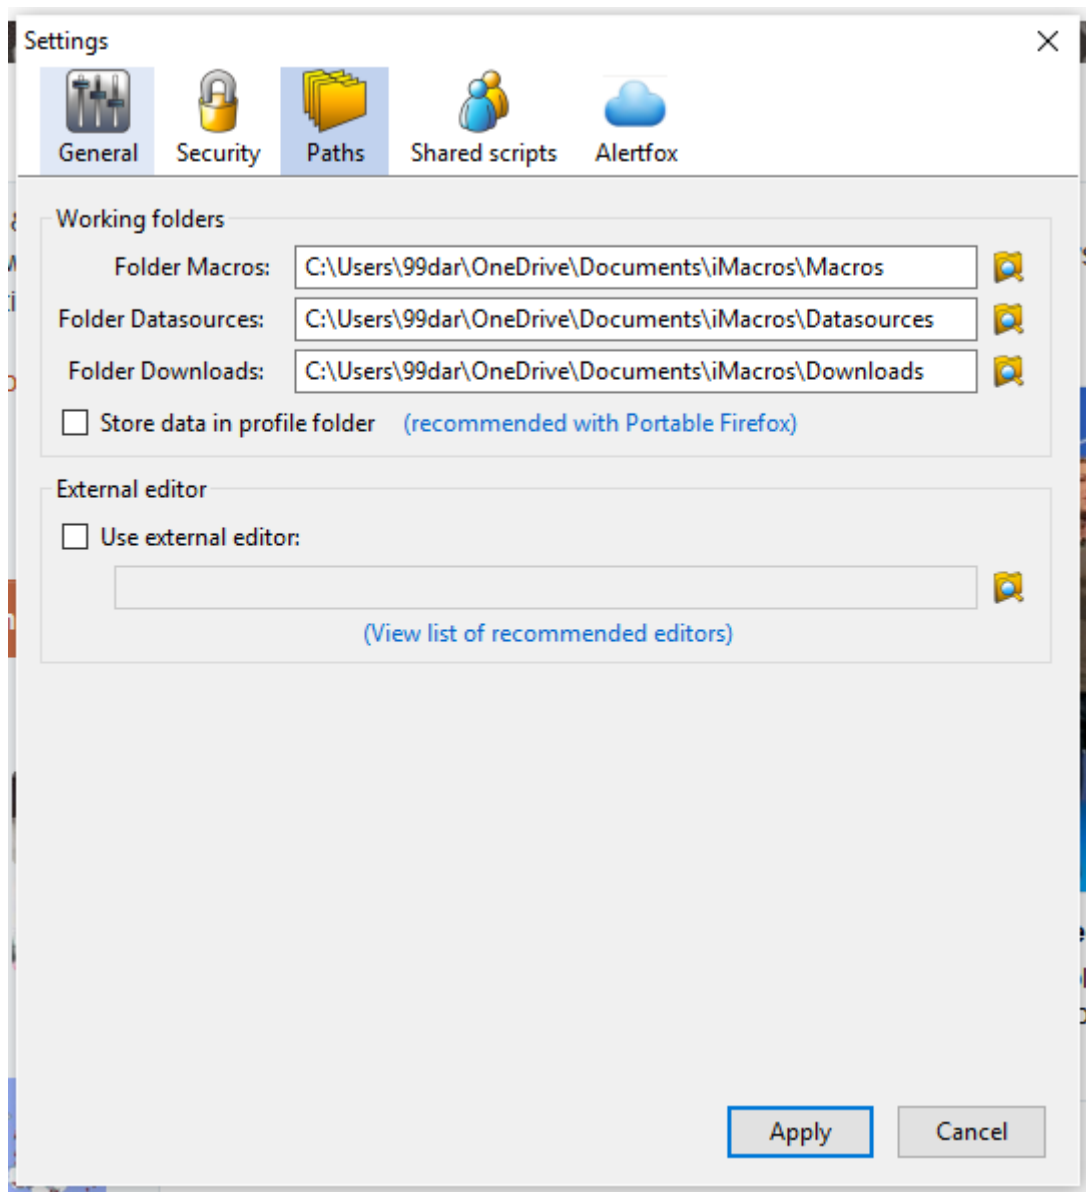

Click Ok.

When GreaseMonkey is enabled (and your Autoscroll script), it will automatically start scrolling on any Twitter page (just be sure to disable it when you don't need to scroll).

Add the CSV Files to Imacros

In the files you downloaded from me, there is a folder called "CSV Templates".

Copy and paste these files into your "Downloads" folder of Imacros. Similar to how you found the path to "Folder Macros" only this time find the location of "Folder Downloads" and paste the files there.

That's it, you are all set.

You'll just need to run the scripts as noted in the [blog post](#).

If you have any issues or feedback, please leave a comment in the post.
